The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over James et al in combination with Clarke (US '033), Waksman et al, and Regunathan et al. James et al teach that the mechanisms involved in airway narrowing in asthma include hypertrophy of smooth muscle. Regunathan et al teach that restenosis is a result of hypertrophy of smooth muscle cells. Waksman et al teach the equivalence of irradiation of the intima of bronchi and blood vessels to prevent hyperproliferation. Clarke (US '033) teaches that restenosis can be treated by irradiation of the lumen wall with lasers radiation having wavelengths in the claimed ranges to prevent the replication and growth of smooth muscle cells. It would have been obvious to the artisan of ordinary skill use the method of Clarke (US '033) for treating asthma, since bronchial smooth muscle cells and vascular smooth muscle cells are equivalent and both asthma and restenosis involve hypertrophy of smooth muscle cells, as taught by James et al and Regunathan et al, and to move the device while irradiating, since this would allow the treatment longer lesions, thus producing a method such as claimed.

Applicant's arguments with respect to claims 1-3, 4-11, and 13-15 have been considered but are moot in view of the new ground(s) of rejection.
